Dear Hiring Manager,

I am writing to apply for the **Software Development Engineer, React JS / Front End** position at SavvyMoney. The opportunity to build responsive, user-centric web applications for a leading fintech that serves 1,475+ bank and credit union partners—and to do so as part of a distributed global team from India—strongly aligns with my experience in React/TypeScript and my interest in impactful, scalable products.

I have 4+ years of hands-on experience building responsive web applications with **React** and **TypeScript**. In my current role, I develop and maintain production frontends with a focus on reusability, performance, and maintainability. I collaborate closely with UX/UI designers to implement designs faithfully, apply UX best practices, and ensure a seamless experience across devices. I am comfortable taking design guidance, iterating on feedback, and translating mockups into clean, accessible interfaces.

I am used to **optimizing applications for speed and scalability**—through code-splitting, lazy loading, and performance profiling—and to ensuring **cross-browser compatibility and mobile responsiveness**. I write clean, well-documented code and take ownership of **troubleshooting and debugging** to improve both performance and usability. I work regularly with **backend developers** on API contracts, integration, and end-to-end feature delivery, and I collaborate with product managers and other stakeholders in a multidisciplinary setup. I enjoy breaking down ambiguous problems and driving them to practical solutions, which matches the analytical, problem-solver mindset you described.

SavvyMoney's recognition as one of the Top 25 Places to Work in the San Francisco Bay Area and as an Inc. 5000 Fastest Growing Company reflects a culture I want to be part of. I am based in India, set up for **100% remote work**, and would be glad to contribute to your distributed team across the USA, Canada, Europe, and India.

I would welcome the opportunity to discuss how my experience in React/TypeScript, design collaboration, and performance-focused frontend development can support SavvyMoney's credit score and personal finance solutions.

Thank you for considering my application.
Sincerely,
Shubham Printe
